

# Technology

The first choice in consumer and commercial debt collection

Secure

Scalable

Flexible

## Today's Collection Environment

Technology is critical in today's debt collection environment. Cypress Asset Recovery has invested in cutting edge technology and information systems designed to deliver an unmatched liquidation rate to our clients. Our progressive technology combined with our proven collection techniques make us a true impact partner for our clients.

Cypress Asset Recovery has built its platform on highly advanced collection software which was developed using the latest .NET development tools and uses the latest Microsoft™ SQL Server database technologies. Our technology provides us access to the most current and comprehensive collection of public records and locator information available in the industry. These tools include the ability to locate real property, bank accounts, current address, place of employment, home/cell phone numbers, business ownership verification and corporate status, just to name a few.

## We Give You a Choice

It is all about giving our clients a choice. You can do business with us the traditional way, by picking up the phone and talking with your personal account manager who will be able to assist with all your collection concerns. Or you can take advantage of our highly advanced collection software and access and view your accounts in real time using a secure web portal day or night. This secure access allows clients to audit our collection efforts, make balance adjustments, notify us of direct payments, place accounts for collections and run specific collection reports. This technology is provided to clients of any size and placement volume.

Cypress Asset Recovery's software is highly scalable and flexible. Should clients choose to electronically transfer accounts for collection in any format, Cypress Asset Recovery has the capacity to work with those files quickly and effectively. Ease of use, accessibility, ability to adapt and a range of products are some of the keys to a successful client/agency relationship.

That's why each of our representatives is trained in the efficient and effective operation of our hardware and software programs; so our clients can receive the maximum benefit from the technology we have available.

Human expertise and interaction are vital. We offer the best of both, providing our clients with a winning combination of top quality personnel and cutting-edge technology that gets rapid results and sets us apart from our competitors.
